

East Structure Group

Miller Canyon Cabins

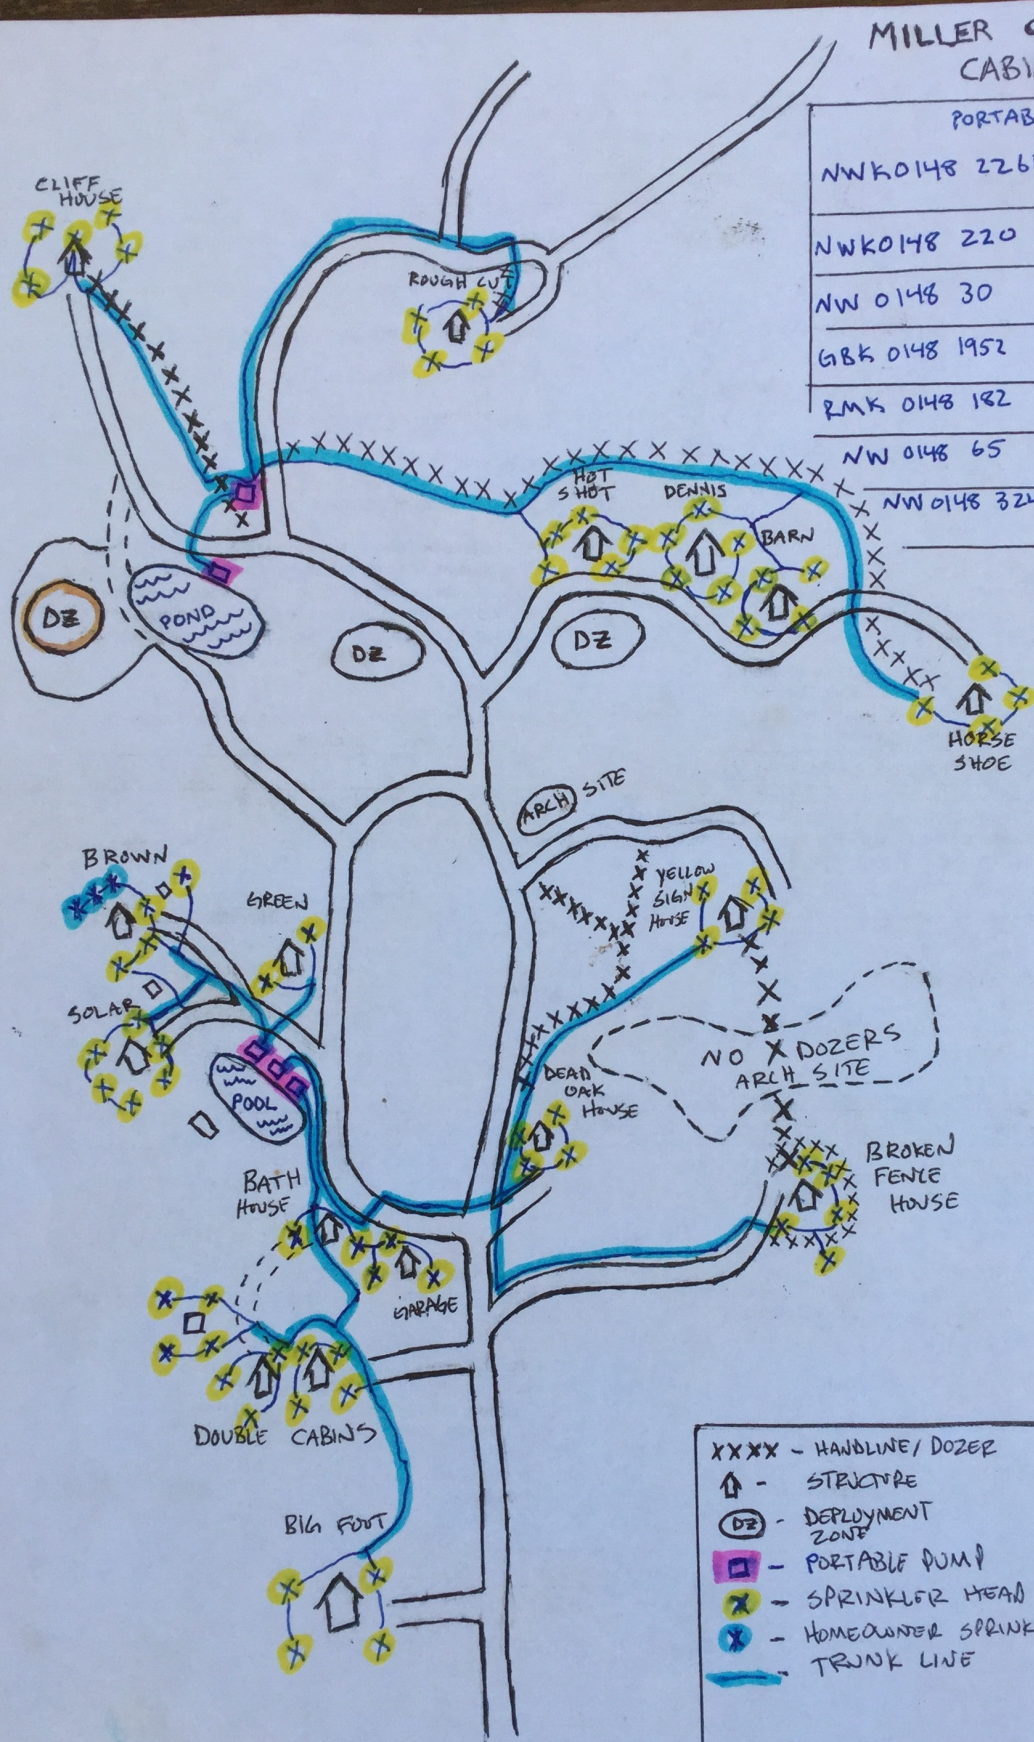

(known as Tan Bark by local residents)

One resident, an ex-hotshot named Patrick, will not evacuate.

The following structure preparations have been completed around the cabins to create defensible space:

- Raked fine fuels away from the base of structures to create a 0-3 ft. area void of fine fuels, was not be possible in all areas due to the terrain and yard debris.
- Installed a temporary sprinkler system around the perimeter of the structures to increase the fine dead fuel moisture thus reducing the flammability of the surrounding fuels.
- Removed ladders fuels to inhibit ground fire transitioning to tree crowns.
- Constructed fire line around items to lessen the risk of loss to fire.
- Consider staging firefighters and/or equipment in the area to suppress the fire when conditions permit resources to safely be in the area
